

Dev Days – GitHub Copilot CLI

Riding the waves

Wave 1

Wave 2

Today

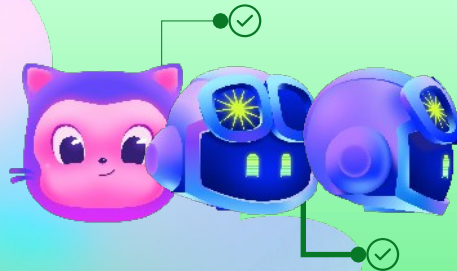

Wave 3

Pair programmer

Code completion
(2021-2023)

Beyond pair programmers

Agentic SDLC
(2024-2025)

Teams + agents

Hybrid teams
(2026+)

GITHUB COPILOT 

Code, command, and collaborate

AI that works where you do, whether in your editor, on the command line, or across GitHub.

4 files changed

TS `race-service.ts` `src/lib/data`

 `race-service.test.ts` `src/lib/data`

TS `+page.server.ts` `src/routes`

 `+page.svelte` `src/routes`

 Add Context...

Edit files in your workspace in agent mode

Agent  Auto 

Go beyond one-size-fits-all

Choose from leading LLMs optimized for speed, accuracy, or cost.

Use your agents, your way

Use GitHub Copilot, your own custom agents, or the third-party ones you already rely on.

Stay in your flow

Copilot works where you do—in GitHub, your IDE, the CLI, project tools, chat apps, and custom MCP servers.

One GitHub Copilot,
everywhere you code

GitHub Copilot is available across IDEs, web, and mobile

```
27 const response = await fetch(basePageDataUrl)
```

Copilot AI reviewed just now

The fetch call is not awaited. This can lead to unexpected behavior. Use `await fetch(basePageDataUrl)` instead.

Suggested change

```
27 - const response = fetch(basePageDataUrl)
27 + const response = await fetch(basePageDataUrl)
```

GitHub.com & GitHub mobile apps

LESS // TODO: MORE DONE

GitHub Copilot CLI

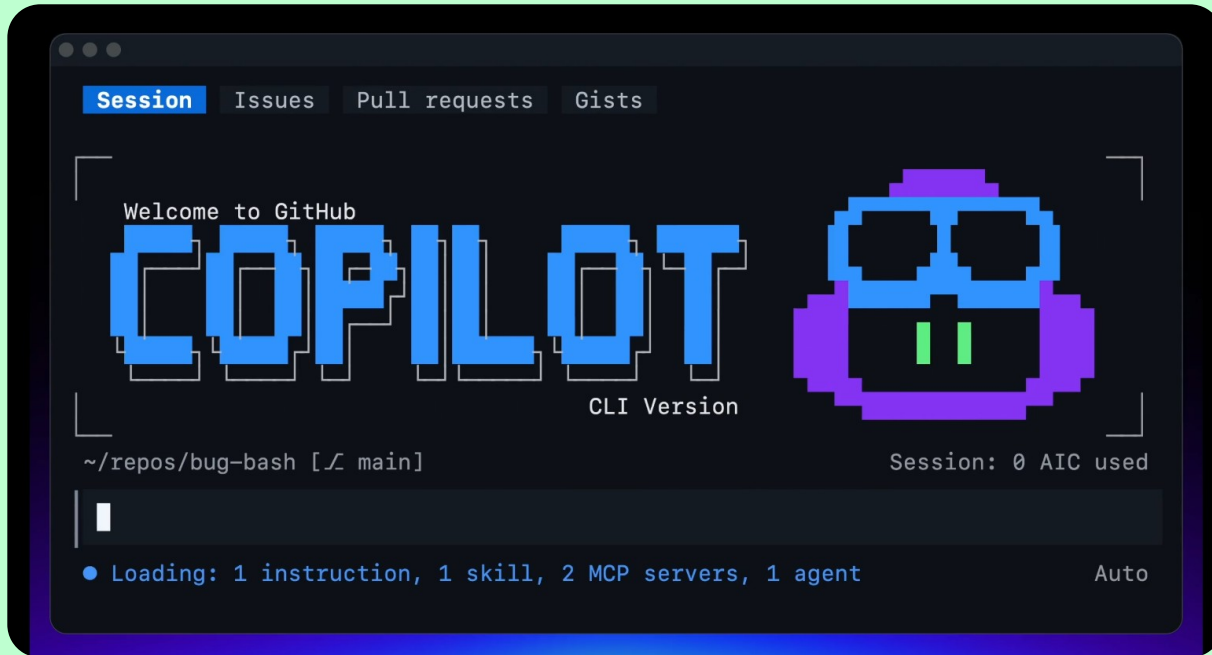

A terminal window with a dark background and a light gray title bar. The title bar has three small circles on the left. The terminal content shows a shell prompt with the text "MonaLisa ~/repos/bug-bash \$" followed by a white cursor block.

○ MonaLisa ~/repos/bug-bash \$ █

 What's in the box

Core Features

- Interactive Assistance
- Code Generation & Modification
- Multi-file context awareness
- Modes for multiple situations Plan/Autopilot/et
- Remote Sessions
- OpenTelemetry
- Headless Automation
- Tool Execution & Shell Commands
- BYOK/ Custom Providers
- Skills, Tools, Hooks, MCP
- Streaming
- Permissions

Slash commands

`/agent`

Switch to a custom agent

`/plan`

Plan out an implementation before writing any code

`/every` & `/after`

Schedule a prompt or skill within the current CLI session

`/rubber-duck`

Get a second opinion from a different agent

`/remote`

Start in the terminal, then monitor, steer, and merge from GitHub.com or your phone

`/model`

View all available models and choose which to use

`/mcp`

Manage your MCP servers

`/yolo`

Enable all permissions

`/diff`

Review changes made in directory

`/skills`

Manage & call skills

`/delegate`

Push the task to Copilot cloud agent on GitHub

`/cwd` or `/cd`

Change working directory mid-session

`/fork`

Fork the current session into a new session

`/context`

Info on token usage & context window

`/review`

Run a code review to analyze changes

`/sandbox`

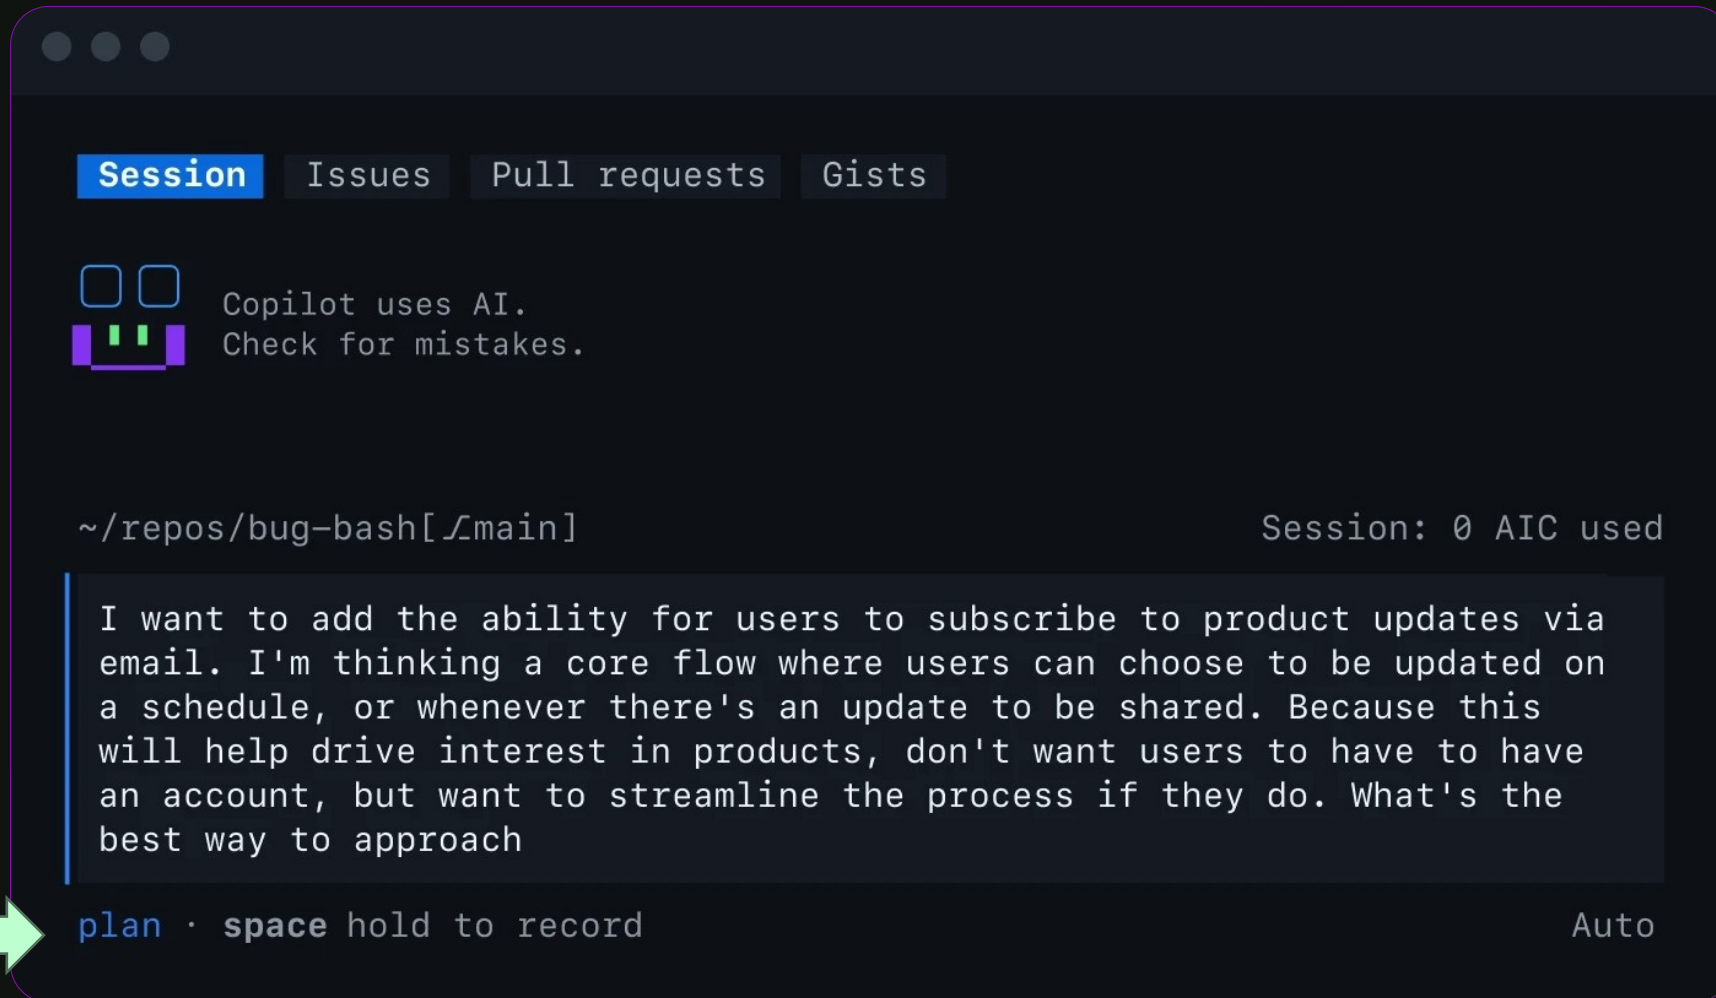

Configure sandbox settings

`/fleet`

Coordinate subagents

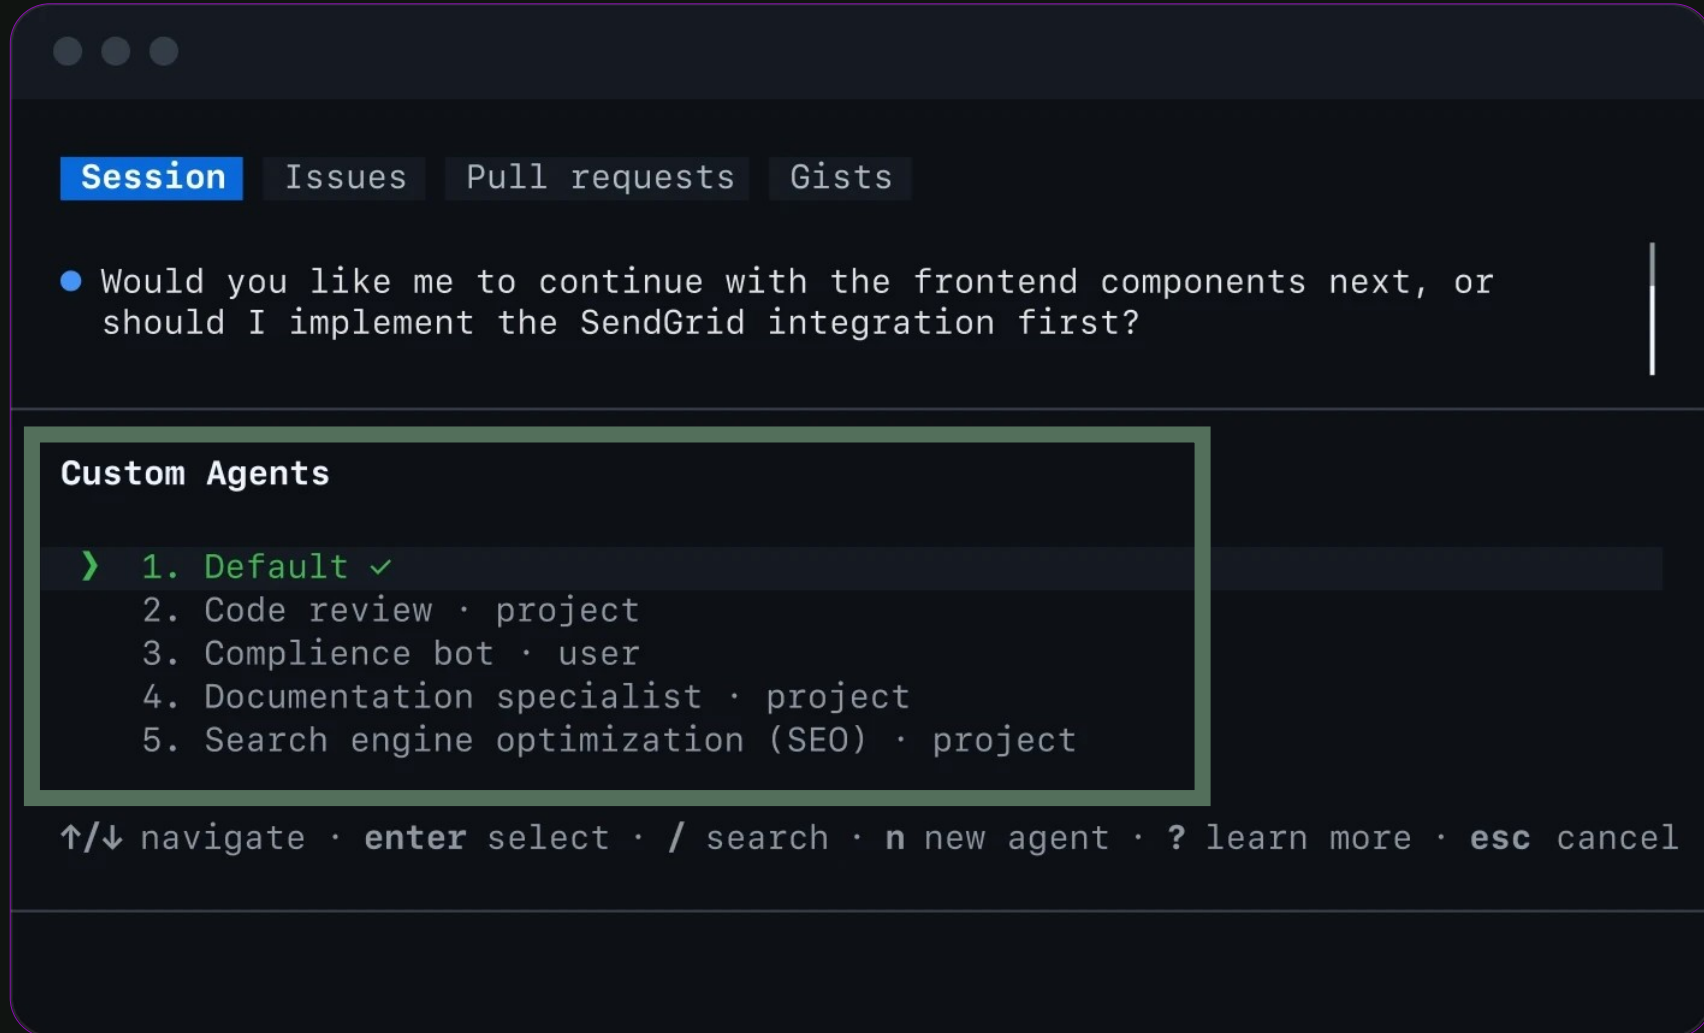

OUTLINE THE WORK, USE /MODEL TO COMPARE APPROACHES, AND THEN USE AUTOPILOT MODE TO IMPLEMENT WITHOUT STEP-BY-STEP APPROVAL.

/plan with a team of agents

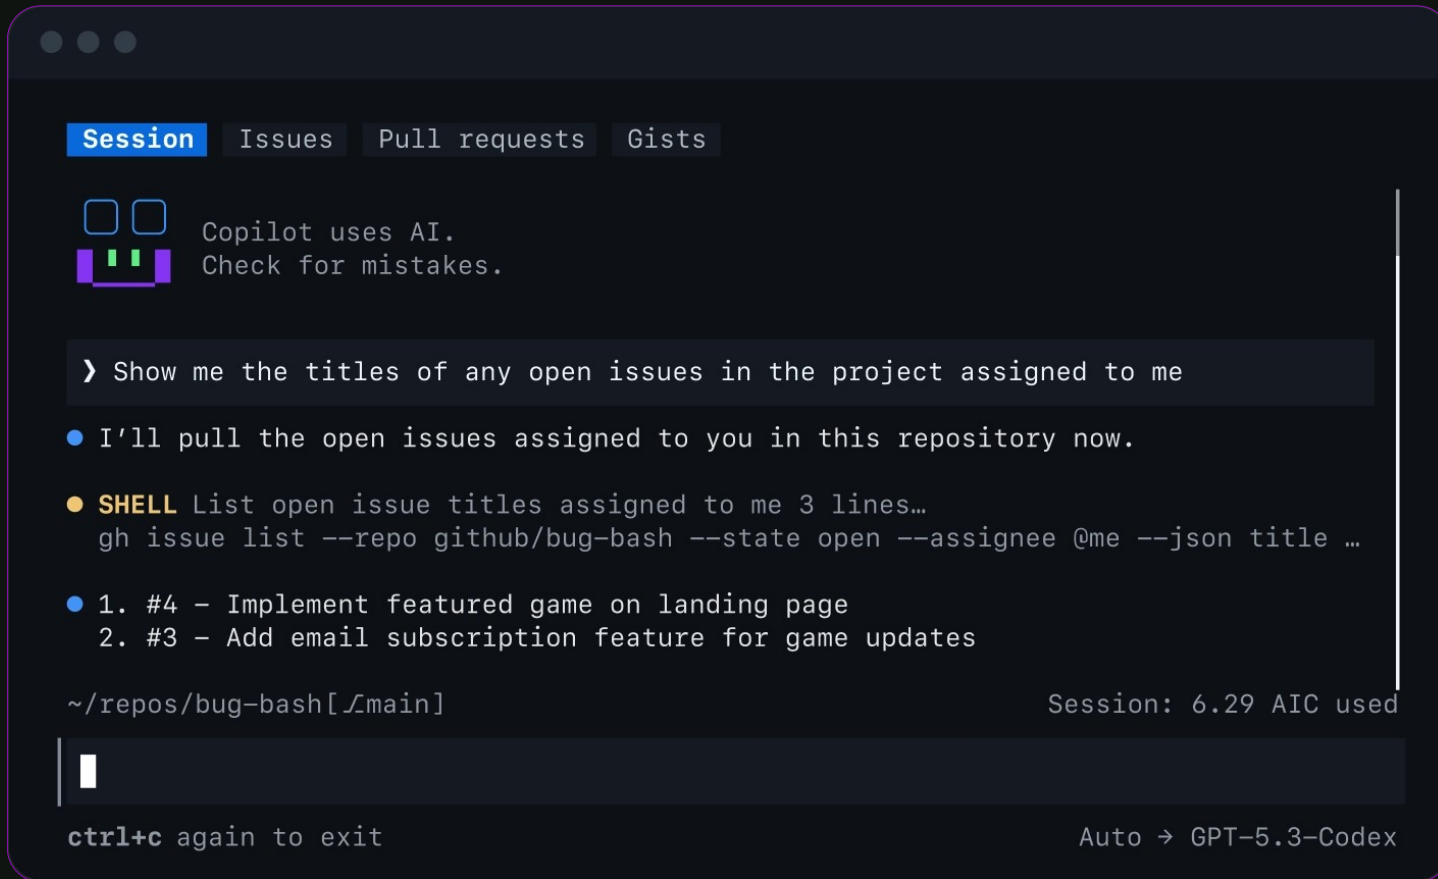

DEFINE CUSTOM INSTRUCTIONS AND TOOL ACCESS, SO BEHAVIOR STAYS CONSISTENT ACROSS MODELS, SESSIONS, AND DELEGATED WORK.

Shape behavior with /agent and /skills

MOVE FROM BACKLOG TO IMPLEMENTATION WITHOUT CONTEXT HUNTING.

Work with your issues, PRs, and more

```
Session Issues Pull requests Gists

Copilot uses AI.
Check for mistakes.

> Show me the titles of any open issues in the project assigned to me

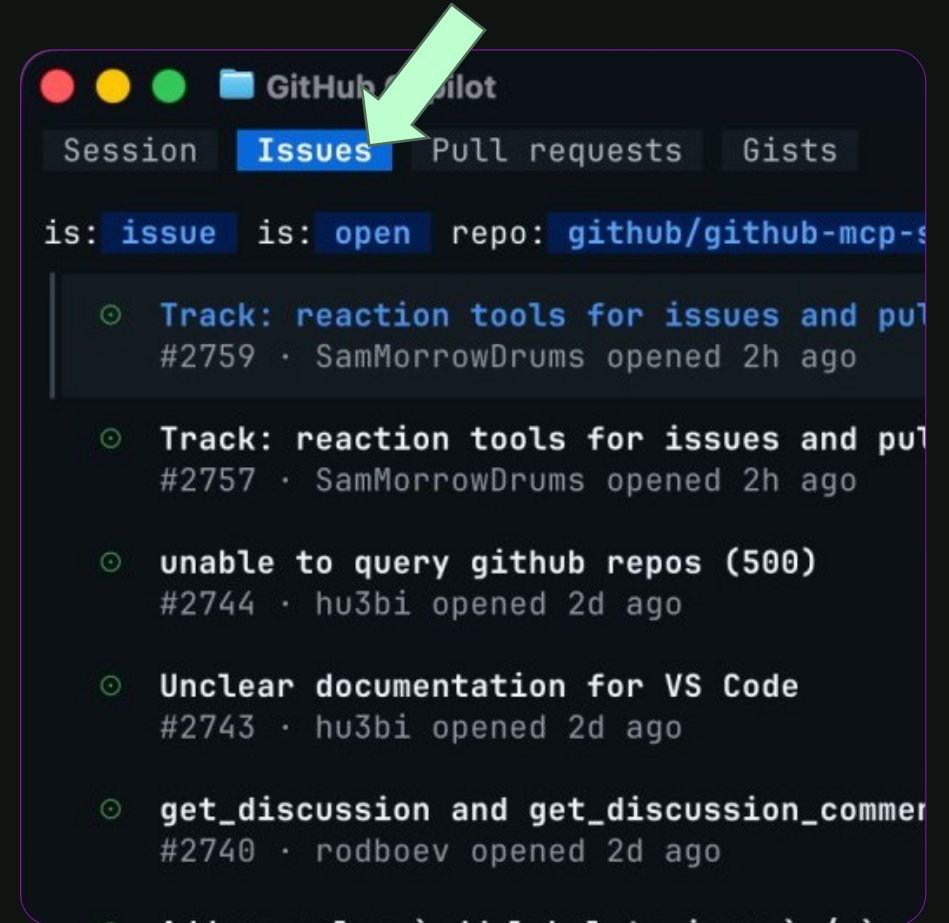

• I'll pull the open issues assigned to you in this repository now.

• SHELL List open issue titles assigned to me 3 lines...
  gh issue list --repo github/bug-bash --state open --assignee @me --json title ...

• 1. #4 - Implement featured game on landing page
  2. #3 - Add email subscription feature for game updates

~/repos/bug-bash[./main] Session: 6.29 AIC used

ctrl+c again to exit Auto → GPT-5.3-Codex
```

```

```

CREATE A BRANCH, IMPLEMENT A CHANGE, AND OPEN A PULL REQUEST WITH A SINGLE COMMAND.

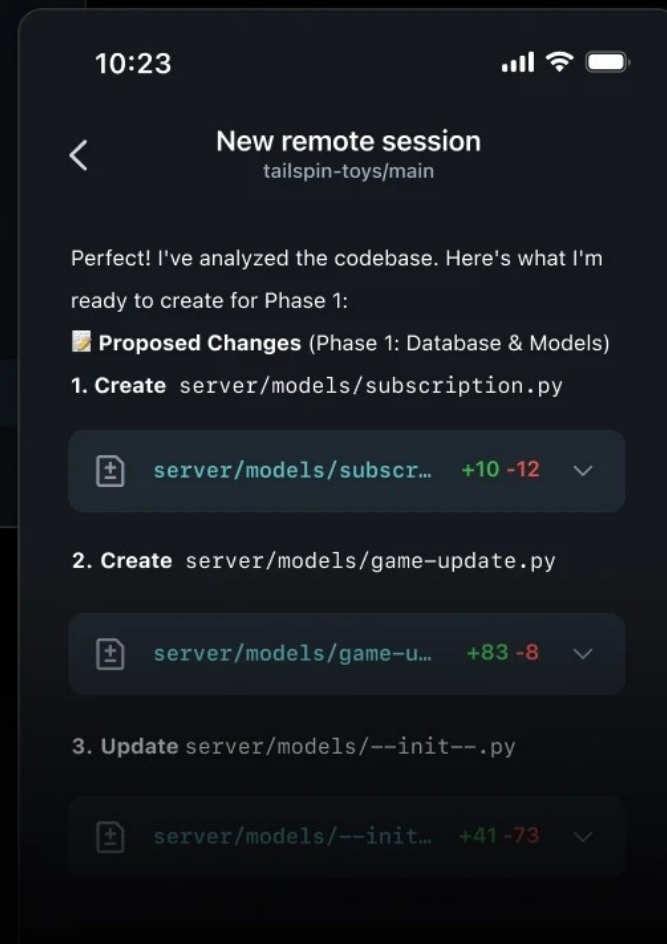

/delegate work to the cloud

START IN THE TERMINAL, THEN MONITOR, STEER, AND MERGE FROM GITHUB.COM OR YOUR PHONE.

/remote to any device

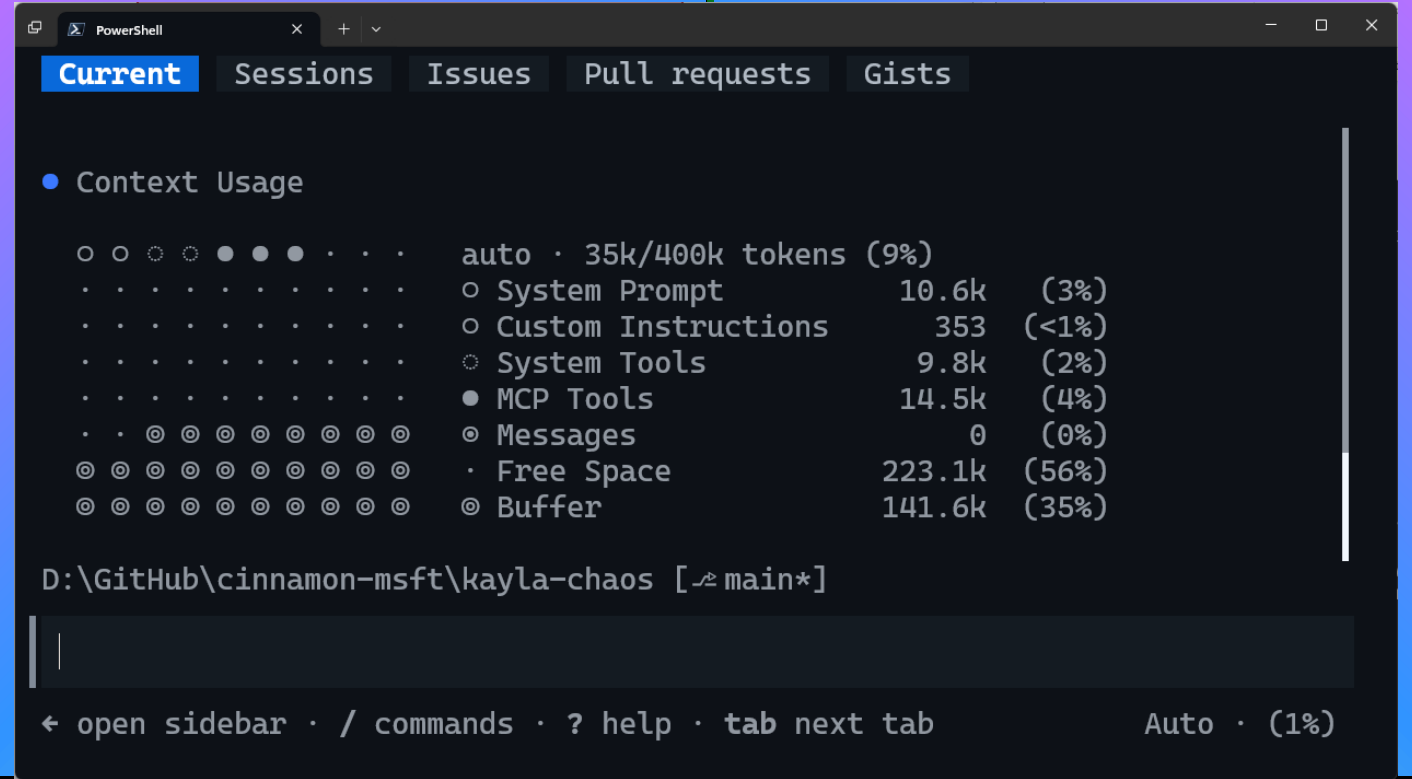

```
● Perfect I've analyzed the codebase of octo-demo/tailspin-toys.  
Here's what I'm ready to create for Phase 1:  
  
📁 Proposed Changes (Phase 1: Database & Models)  
  
1. Create server/models/subscription.py  
  
from datetime import datetime  
~/repos/tailspin-toys[~/main]  
  
/remote  
  
/remote      Enable steering your session from GitHub web & mobile
```

GitHub Copilot CLI

Context

Infinite Sessions (a CLI exclusive) means you likely never have to worry about these, but when you want to manage your context more directly, you can:

/context

Visualize what is in your context window.

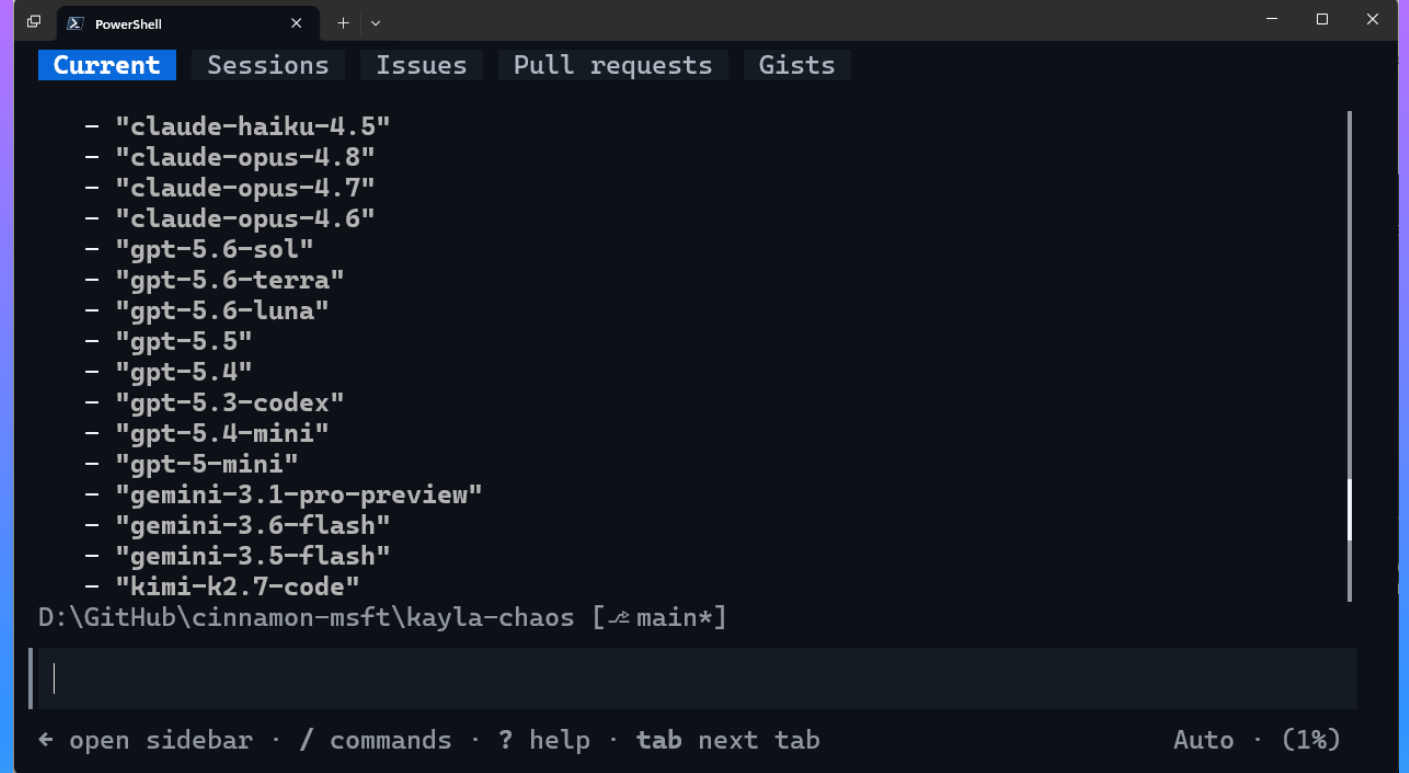

/compact

Summarizes current context and compacts to smaller size.

GitHub Copilot CLI

Models!

Models available from all kinds of providers like Microsoft, Anthropic, OpenAI, Google, and Moonshot AI. Plus you can use your own with Bring Your Own Key!

The screenshot shows the GitHub Copilot CLI interface. At the top, there are tabs for 'Current', 'Sessions', 'Issues', 'Pull requests', and 'Gists'. The 'Current' tab is active. Below the tabs, a list of AI models is displayed, each preceded by a minus sign. The models are: "claude-haiku-4.5", "claude-opus-4.8", "claude-opus-4.7", "claude-opus-4.6", "gpt-5.6-sol", "gpt-5.6-terra", "gpt-5.6-luna", "gpt-5.5", "gpt-5.4", "gpt-5.3-codex", "gpt-5.4-mini", "gpt-5-mini", "gemini-3.1-pro-preview", "gemini-3.6-flash", "gemini-3.5-flash", and "kimi-k2.7-code". Below the list, the current directory is shown as "D:\GitHub\cinamon-msft\kayla-chaos [~ main*]". At the bottom, there is a command prompt with a cursor. The status bar at the very bottom shows navigation icons, the text "/ commands · ? help · tab next tab", and "Auto · (1%)" on the right.

```
Current Sessions Issues Pull requests Gists
- "claude-haiku-4.5"
- "claude-opus-4.8"
- "claude-opus-4.7"
- "claude-opus-4.6"
- "gpt-5.6-sol"
- "gpt-5.6-terra"
- "gpt-5.6-luna"
- "gpt-5.5"
- "gpt-5.4"
- "gpt-5.3-codex"
- "gpt-5.4-mini"
- "gpt-5-mini"
- "gemini-3.1-pro-preview"
- "gemini-3.6-flash"
- "gemini-3.5-flash"
- "kimi-k2.7-code"
D:\GitHub\cinamon-msft\kayla-chaos [~ main*]
|
← open sidebar · / commands · ? help · tab next tab Auto · (1%)
```

`/model`

Search through and select which model you want to use.

`/rubber-duck`

Run a code review leveraging a different AI model.

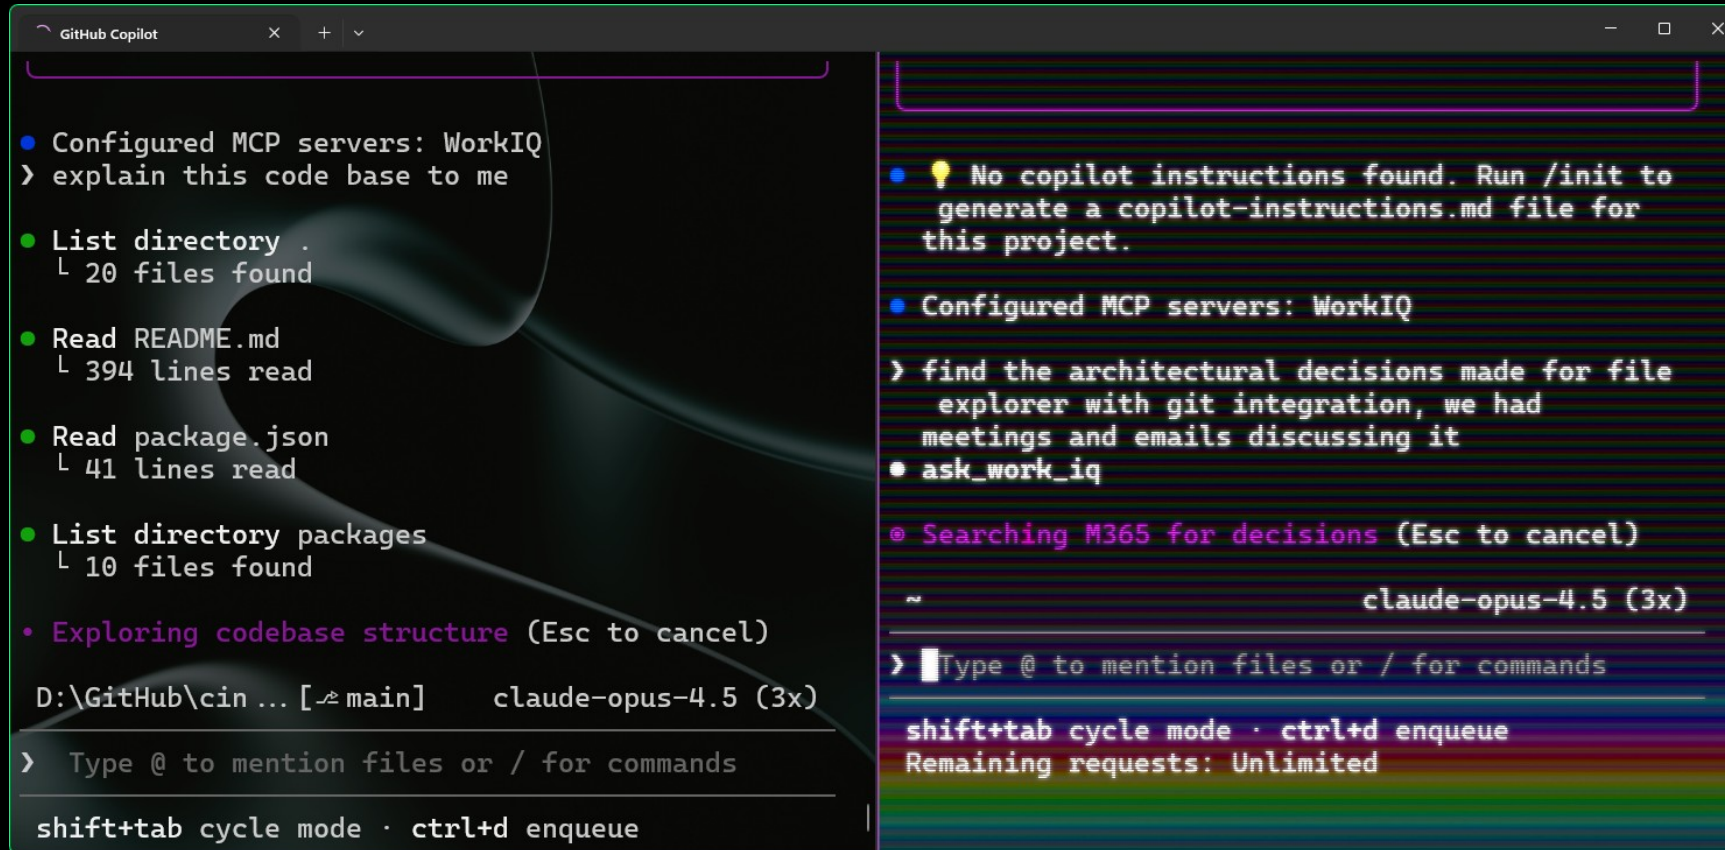

@ to mention files

- Provide Copilot context by @-mentioning files directly in your prompt
- @-mention multiple files at once, including images
- Alternatively drag and drop or paste the file or image to provide context

ALT+V / CMD+V to paste images into CLI

```

← PROJECT INITIATION REQUEST

I'll install the dependencies and then start the
development server for you.

✓ Ran dev script to start server and UI

Dependencies are up to date. Now I'll start the
development servers:

✓ Finished working and invoked 1 tool

✓ Checked background terminal output

The project is running. Let me open the web UI for
you:

✓ Summarized status for the user

Your project is now running:

• Web UI: http://localhost:5173/
• API Server: http://localhost:3001

Available API endpoints:

• POST /api/analyze - Analyze single log file
• POST /api/analyze/multi - Analyze multiple
  log files
• GET /api/health - Health check

You can upload log files through the web interface
to analyze them for patterns, anomalies, and root
causes.

GitHub Copilot CLI

Installation

Windows (WinGet)

```
winget install  
GitHub.Copilot
```

macOS / Linux
(Homebrew)

```
brew install copilot-cli
```

Any OS (npm, Node.js $\geq$
22)

```
npm install -g  
@github/copilot
```

GitHub Copilot Dev Days
